

2-Wheel & 4-Wheel Hand Truck Instructions

Conwin Cylinder Hand Trucks

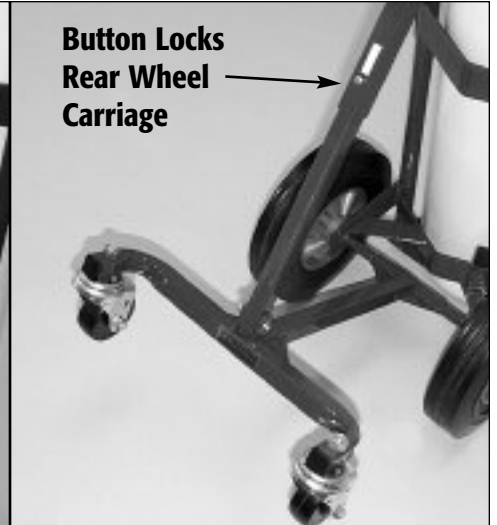

Conwin's Hand Trucks are designed expressly for the balloon industry to support and transport helium cylinders. Conwin hand trucks feature a powder-coated, industrial strength, reinforced steel frame, large ball-bearing wheels and an adjustable Velcro® safety belt to secure cylinders during transport.

2-Wheel & 4-Wheel Hand Trucks

Position the cylinder on the hand truck touching the back support. Firmly tighten the Velcro® safety belt to properly secure the cylinder in place. Use the lower belt hook when transporting small cylinders.

4-Wheel Hand Trucks

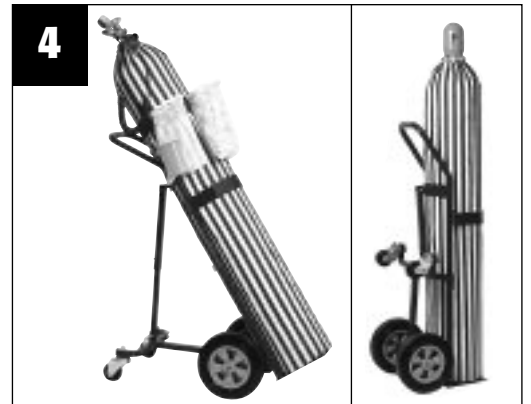

Push the release button to lower the rear wheel carriage. **IMPORTANT: Make sure the release button locks into the second setting hole to secure the rear wheel carriage in the tilt-back position.**

4-Wheel Hand Trucks

Firmly grip the top of the hand truck and place your foot on the rear wheel carriage. Slowly lower the cylinder back on the rear wheels to the tilt-back position.

4-Wheel Hand Trucks

Attach the balloon inflator to the cylinder parallel with the handle of the hand truck. The 4-Wheel Hand Truck doubles as a safety stand when in the tilt-back position. The rear wheel carriage folds up to enable ease in transporting the hand truck to the job and allows user to move cylinders up and down stairs.

Add-On Accessory for Conwin's 4-Wheel Hand Truck

ADD-ON
4-WHEEL HAND TRUCK
WORKBENCH

Add-On Workbench

The Workbench tabletop slides into place and provides a large convenient work area. The side bars are ideal for holding scissors, or to use as a tying point for Conwin's Dacron Archline.
