

## Add-On Workbench Instructions

**1** Lift the Workbench support arm over the back of the 4-Wheel Hand Truck and hook the mounting bracket to the back frame of the hand truck. The support arm frame will point at a 45 degree angle to the ground when it is properly attached to the hand truck.

**2** Position the cylinder on the hand truck touching the back support. Firmly tighten the Velcro® safety belt to properly secure the cylinder in place.

Push the release button to lower the rear wheel carriage.

**IMPORTANT:** Make sure the release button locks into the second setting hole to secure the rear wheel carriage in the tilt-back position. Firmly grip the top of the hand truck and place your foot on the rear wheel carriage. Slowly lower the cylinder back on the rear wheels to the tilt-back position.

Slide the Workbench table on the support arms until it touches the cylinder. For added convenience, Conwin's Balloon Caddy pockets can be placed on the side bars of the Workbench. The side bars are also ideal for holding scissors, or to use as a tying point for Conwin's Dacron Archline.
